<p>Checked controls - wiring in soft start has been disconnected Forward reverse switch has been installed and door has no limits Remounted door back in guides - has been running out of guides. Replaced controls in soft start and required controls in box Replaced brake disc and set up brake unit Set up logics and speeds and limits - test and run door</p> <p>The door controls were altered and left with no limits and relied on whoever operated the door to manually stop it top and bottom. This caused the door to flip a number of times and be driven out of the guides. Whoever wired the manual switch has neglected to include the brake controls and this has caused the door to be driven through brake resulting in wear of brake disc</p>
